## Kardio list uključen u program HINARI

**Mario Ivanuša**  
*Kardio list*

Pored novog formata, koji omogućuje daljnji razvoj mjesecačnog glasila **Hrvatskog kardiološkog društva** tijekom 2008. godine, novost koju ćete zasigurno već primijetiti je dvojezično izdanje koje kreće s ovim brojem. Zahvaljujući sponzoru — farmaceutskoj tvrtci **KRKA-FARMA d.o.o.**, Kardio list bi ove godine trebao izaći u dva dvo-broja (siječanj-veljača, srpanj-kolovoz), te u 8 mjesecičnih brojeva. Kako smo dogovorili veći format i više stranica, prostor za Vaše članke bit će veći, a za sve cjelovite članke osiguran je prostor za sažetak i ključne riječi. Obzirom da će sve biti dostupno i na engleskom jeziku, vjerujem, kao i pred nekoliko mjeseci<sup>1</sup>, da će Kardio list biti prihvatljen za neki od međunarodnih indeksa.

Zahvaljujući našem zajedničkom trudu koji je rezultirao kvalitetnim brojevima mjesecačnog glasila Hrvatskog kardiološkog društva u 2007. godini i dostupnim cjelovitim tekstovima svih članaka, Kardio list je od prosinca 2007. godine uključen u HINARI program (Health InterNetwork Access to Research Initiative) Svjetske zdravstvene organizacije<sup>2</sup>. U idućem članku ovog broja, zapravo e-pismu

## Kardio list included in the HINARI programme

Alongside a new format enabling a further development of the periodical published by the **Croatian Cardiac Society** throughout the year 2008, the new thing you will certainly notice is the edition published in the two languages, starting with this issue. Owing to the sponsor — the pharmaceutical company **KRKA-FARMA d.o.o.**, Kardio list should be published in two bimonthly issues (January-February, July-August) and in 8 monthly issues. As we have agreed on a larger format and more pages, the space for your articles will be larger, and space for summaries and key words will be provided for all complete full text articles. Since everything will be available in the English language as well, I believe, just as a few months ago<sup>1</sup>, that the Kardio list will be acceptable for some of the international indexes.

Owing to our common effort that resulted in better quality issues of the periodical published by the Croatian Cardiac Society in 2007 and available complete texts of all articles, the Kardio list has since 2000 been included in the HINARI programme (Health InterNetwork Access to Research Initiative) International Health Organization<sup>2</sup>. In

upućenom uredniku Kardio lista, možete pročitati više detalja o spomenutom programu.

Tako je sada pored uobičajene indeksacije tiskane i elektroničke inačice u Nacionalnoj i sveučilišnoj knjižnici u Zagrebu<sup>3</sup> i Digitalnom arhivu hrvatskih mrežnih publikacija<sup>4</sup>, časopis sada moguće pronaći i putem poveznica na popisu časopisa dostupnih u punom tekstu u Središnjoj medicinskoj knjižnici<sup>5</sup>, na mrežnim stranicama nacionalnih kardioloških časopisa Europskog kardiološkog društva<sup>6</sup>, putem tražilice znanstvenih informacija Scirus<sup>7</sup> i u Journals Master List Index Copernicusa<sup>8</sup>.

the next article of this issue, that is, an e-mail submitted to the Editor of the Kardio list, you can read about the above programme in more details.

Apart from some usual indexation in printed and electronic form in the National and University Library in Zagreb<sup>3</sup> as well as digital archive of the Croatian network publications<sup>4</sup>, the Journal may now by means of links be found on the list of journals accessible in full text in the Central Medical Library<sup>5</sup>, on network site of the European National Society Journals, of the European Society of Cardiology<sup>6</sup>, through search engine of scientific information Scirus<sup>7</sup> and in Journals Master List Index Copernicus<sup>8</sup>.

## Sudjelovanje u programu HINARI

## Participating in the HINARI Programme

**Maurice Long**

Publisher Coordinator: HINARI-AGORA-OARE

International Association of Scientific, Technical and Medical Publishers, Oxford, United Kingdom

Vrlo mi je draga da Hrvatsko kardiološko društvo razmatra mogućnost priključenja programu HINARI. Sudjelovanje je s tehničke strane jednostavno, a moj kolega Kimberly Parker iz knjižnice fakulteta Yale koji upravlja većinom procesa kojima se osigurava rad programa HINARI, Vam je već poslao informacije o svim potrebnim tehničkim koracima. Ja uskladujem ulazne informacije u programe.

HINARI, kojeg sponzorira Svjetska zdravstvena organizacija (SZO) ima dva sestrinska programa: AGORA (Pristup on-line globalnom istraživanju u poljoprivredi) koju sponzorira Organizacija za prehranu i poljoprivredu i OARE (Online pristup istraživanju okoliša) koja se sponzorira Programom Ujedinjenih naroda za okoliš u suradnji sa Fakultetom šumarstva i ekologije na Yale-u. Registrirane institucije imaju korisnički identifikacijski broj ID, te se

I am very pleased that the Croatian Cardiac Society is considering joining the HINARI programme. Participation is very simple technically, and my colleague Kimberly Parker at Yale University Library, who manages much of the processes which ensure that HINARI actually works, has already sent you information about all the necessary technical steps. I coordinate publisher input into the programmes.

HINARI, sponsored by the World Health Organization has two sister programmes: AGORA (Access to Online Global Research in Agriculture) sponsored by the Food and Agriculture Organization and OARE (Online Access to Research in the Environment) sponsored by the United Nations Environment Programme, in cooperation with Yale University's School of Forestry and Environmental Studies. Registered institutions are supplied with User / ID, and are
