

Izvešće sa sastanka Podružnice HKD za Slavoniju i Baranju

Baranja and Slavonia Branch Office of the CCS Meeting Report

Pejo Samardžić

President of the Baranja and Slavonia Branch Office of the Croatian Cardiac Society

Dana 24. studenoga 2007. godine u Vukovaru u hotelu "Lav" održan je drugi ovogodišnji stručni skup Podružnice Hrvatskog kardiološkog društva za Slavoniju i Baranju. Tema stručnog skupa je bila akutni koronarni sindrom. Predavači su bili: prof. dr. sc. Davor Miličić predsjednik HKD ("Novi pogledi na definiciju akutnog srčanog infarkta"), prof. dr. sc. Mijo Bergovec potpredsjednik HKD ("Čimbenici rizika u koronarnih bolesnika u Hrvatskoj") i prof. dr. sc. Vjeran Nikolić Heitzler predsjednik Radne skupine za akutni koronarni sindrom ("Primarna PCI u Hrvatskoj"). Skupu je nazočilo četrdesetak članova HKD iz svih gradova Slavonije (Virovitica, Nova Gradiška, Požega, Našice, Osijek, Vinkovci, Vukovar i Slavonski Brod).

Poslije zanimljivih predavanja uslijedila je živa, konstruktivna diskusija o ovoj temi te o organizaciji mreže za perkutanu koronarnu intervenciju na području Slavonije. Primarna PCI u akutnom infarktu miokarda s elevacijom ST-segmenta za sada je moguća u Kliničkoj bolnici Osijek, a uskoro će se priključiti i Opća bolnica Slavonski Brod u kojoj se za sada ovaj zahvat radi samo tijekom radnog vremena.

Još jednom se pokazalo da ovakva druženja i razgovori doprinose boljem razumijevanju i poboljšanju suradnje. Skup je pozdravila dr. Vesna Bosanac, ravnateljica bolnice u Vukovaru, koja nam je kasnije bila i najbolji vodič, živi svjedok, u razgledanju stalne muzejske izložbe Mjesto sjećanja — Vukovarska bolnica 1991.

The second experts' meeting of the Slavonia and Baranja Branch Office of the Croatian Cardiac Society was held on 24th November 2007 in Vukovar in the "Lav" hotel. The topic of the experts' meeting was an acute coronary syndrome. The lecturers were the following: Prof. Davor Miličić Ph.D., the President of the Croatian Cardiac Society ("New perspectives of the definition of acute myocardial infarction"), Prof. Mijo Bergovec Ph.D., Vice-President of the Croatian Cardiac Society ("Risk factors with coronary patients in Croatia") and Prof. Vjeran Nikolić Heitzler Ph.D., President of the Working Group for the Acute Coronary Syndrome ("Primary PCI in Croatia"). The meeting was attended by around forty members of the Croatian Cardiac Society from all Slavonian towns (Virovitica, Nova Gradiška, Požega, Našice, Osijek, Vinkovci, Vukovar and Slavonski Brod).

The highly interesting lectures were followed by a lively, fruitful discussion on this topic and network organization for percutaneous coronary intervention in the region of Slavonia. The primary PCI in the acute myocardial infarction with elevation of ST-segment is possible in the Clinical Hospital Osijek at the moment and soon it will be also possible in the Slavonski Brod General Hospital where the intervention is performed only during the working hours for the time being.

Again such socializing and discussions proved to contribute to a better understanding and improvement of collaboration. The meeting was welcomed by Vesna Bosanac M.D., the Principal of the Vukovar General Hospital who was our best guide, a living witness, in visiting the permanent museum exhibition, the Place of Remembrance — the 1991 Vukovar Hospital.
