

Dvadeset godina invazivne kardiologije u Kliničkoj bolnici Dubrava

Twenty years of invasive cardiology in the Dubrava Clinical Hospital

Mario Sićaja

*Klinička bolnica Dubrava, Zagreb, Hrvatska
Dubrava Clinical Hospital, Zagreb, Croatia*

U organizaciji Zavoda za bolesti srca i krvnih žila Kliničke bolnice Dubrava, Hrvatskog kardiološkog društva i Hrvatske akademije medicinskih znanosti održan je sastanak povodom dvadeset godina invazivne kardiologije u Kliničkoj bolnici Dubrava. Uz slavljenički dio koji je bio obilježen kratkim pregledom bogate povijesti invazivne kardiologije u sklopu KB Dubrava uz zahvale suradnim centrima i pojedincima, održan je i stručni simpozij sa temom "Koronarna bolest i dijabetes".

Na skupu su aktivno sudjelovali kolege iz svih centara invazivne kardiologije u Hrvatskoj, uključujući centre iz Splita, Rijeke, Zagreba, Specijalne bolnice "Magdalena", ali također i uz aktivno sudjelovanje kolega i iz susjedne Bosne i Hercegovine. Tijekom dva dijela predavanja, uslijedila je zanimljiva rasprava u okviru Okruglog stola. Uz izrazito dobru posjećenost izrazito nam je drago da su naznačene i daljnje crte nacionalnog razvoja invazivne kardiologije u Hrvatskoj.

Zahvaljujemo se također i generalnom sponzoru Cordis koji je također zajedno sa nama obilježio 40 godina vlastitog rada u području invazivne kardiologije. Zahvaljujemo se svima na sudjelovanju, a osobito našim kolegama koji su zajedno sa nama obilježili ovu vrijednu obljetnicu.

The meeting on occasion of commemorating twenty years of invasive cardiology organized by the Department for cardiovascular diseases of the Dubrava Clinical Hospital, Croatian Cardiac Society and the Croatian Academy of Medical Sciences was held in the Dubrava Clinical Hospital. Besides the celebration part characterized by a short review of the rich history of invasive cardiology within the Dubrava Clinical Hospital expressing thanks to the cooperating centers and individuals, the expert symposium with the topic "Coronary disease and diabetes" was held.

The colleagues from all invasive cardiology centers in Croatia actively participated in the meeting, including not only the centers from Split, Rijeka, Zagreb, Special Hospital "Magdalena", but also the colleagues from neighboring Bosnia and Herzegovina who actively participated in the meeting. During the lecture, consisting of two parts, there was an interesting discussion at the Round table. Being extremely well visited, we are especially pleased to have been presented some further outlines of the national development of the invasive cardiology in Croatia.

We also wish to thank to the general sponsor Cordis that also joined us in commemorating 40 years of its own work in the area of invasive cardiology. We thank to all for participation, especially to our colleagues who commemorated this valuable anniversary with us.
